

**Metahuman File 4010**  
**Codename: 8-Ball**

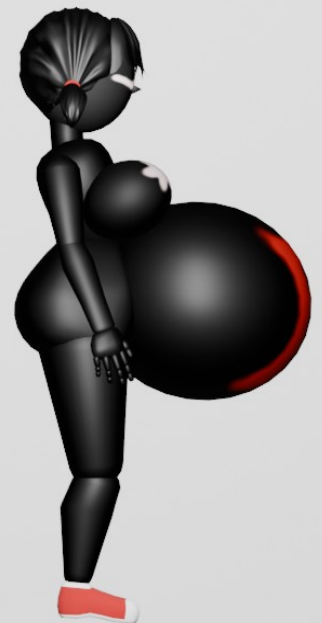

Date of entry 07-10-2020  
Updated 07-31-2025

Personal data

Sex: F  
Race: Unknown  
Height: Unknown, estimated between 150-158 cm.  
Hair: Black  
Skin: Black (possibly a bodysuit)  
Eyes: White  
Date of birth: Unknown  
Address: Unknown  
Occupation: Unknown  
Legal name: Unknown  
Aliases: None given, many regional nicknames (see: Supplemental File 2)  
Affiliations: Unknown

Distinguishing features

Is usually sighted while appearing pregnant, in varying stages of gestation. Proportionally wide hips. Is often seen in red sneakers. Has white star-shaped markings on both breasts, resembling pasties. Often employs red body paint on the abdomen, using different Japanese Kanji that seem to correspond to stage in pregnancy (see: Supplemental File 2).

Metahuman type

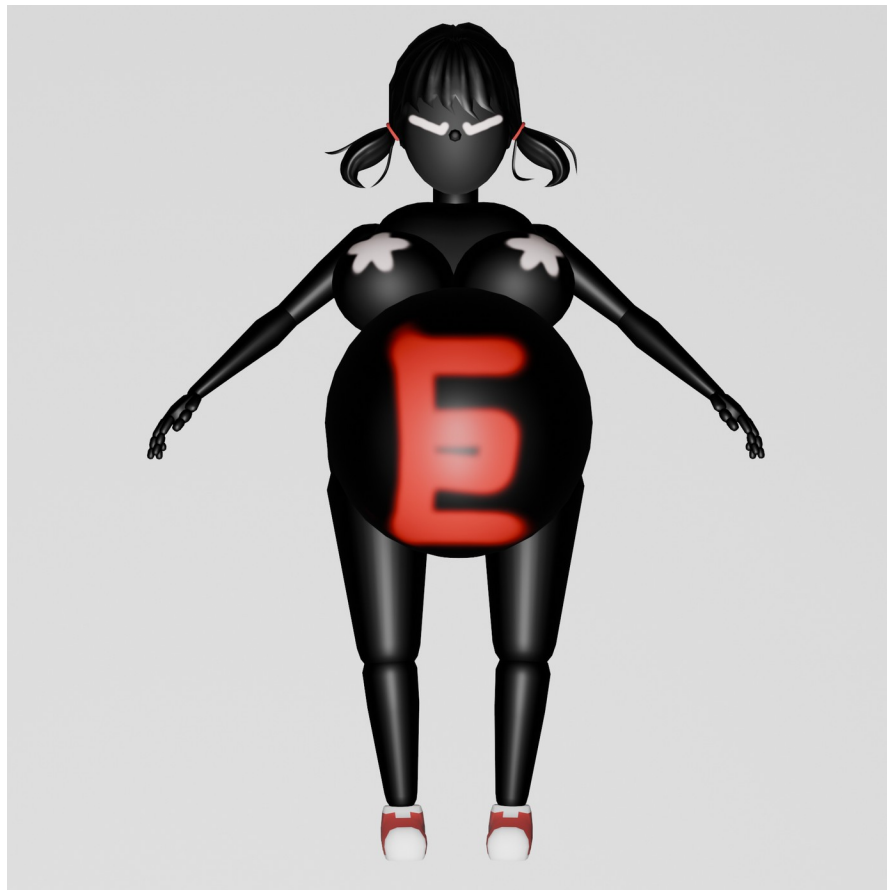

Varies (see Superhuman abilities summary)

*Figure 1: Artist rendition, subject pictured here not pregnant. Metahuman type at this stage: Class 1.*

## Superhuman abilities summary

8-BALL exhibits abilities that increase with pregnancy. Strength and durability increase dramatically at later stages of gestation. When not pregnant (or very early in pregnancy), 8-BALL shows no abilities exceeding that of a human in excellent physical condition. In contrast, when at end-term or close to it, she has demonstrated the ability to break through solid walls.

*Figure 2: Artist rendition, subject pictured here at late-term pregnancy. Metahuman type at this stage: Class 3.*

8-BALL seems to, either as a side effect of her abilities or on purpose (see Supplemental File 1), produce much larger than average offspring. 8-BALL, upon successfully destroying an organization (i.e. gang, crime family, hate group, etc.) has multiple times left behind recently born

infants that weighed an average of 19 pounds, with the heaviest being measured at 22 pounds, recovered after the [REDACTED]. 8-BALL would give birth shortly after combat, or according to some survivors, [REDACTED]. 8-BALL was even reported by those same survivors to [REDACTED]. See Supplemental File 1 for speculations on other abilities.

Other abilities summary

8-BALL demonstrates a high level of athletic ability even at early stages of pregnancy. 8-BALL is also a very dangerous close combatant, with reported techniques which resemble karate and a hojojutsu (a Japanese martial art using rope to bind opponents). 8-BALL also demonstrates high competence at infiltration and stealth.

Techniques and tactics

*Figure 3: Artist's rendition of signature tool, the grapple rope. Will also use it in combat via "hojojutsu".*

8-BALL appears to intentionally initiate a pregnancy to coincide with a campaign to destroy an organization. The Department interviewed male individuals who claimed to have had intercourse with 8-BALL. While exact circumstances differed, a common report was that 8-BALL would approach an outside apartment window while the interviewees were at home, and request non-verbally to be let inside. 8-BALL would then, still non-verbally, proposition them for sex. Multiple of those interviewed most recently remarked that they knew what it meant when 8-BALL came to visit them unannounced, and those who were

approving of her activities told the Department that they were quite willing to impregnate 8-BALL to help her start a new campaign.

While early in pregnancy, it is inferred that 8-BALL will engage in reconnaissance, intelligence gathering, and stealth tactics while avoiding direct contact with her target. Reports of exact tactics are sparse, as she seldom reveals herself openly during this phase and when encountered, will try to escape rather than fight. This is likely because she does not yet have the strength and durability for direct combat.

After several months of covert operations and pregnancy is visible, 8-BALL will begin to operate more openly, striking peripheral targets such as branches, outposts, lieutenants. 8-BALL will still avoid open combat with large numbers of opponents, but at this phase is strong enough to defeat multiple combatants at once. Reports of tactics become more detailed. 8-BALL will use a combination of enhanced martial arts and her grapple rope (see Fig.3) to subdue opponents.

After months more of whittling away at the edges of an organization and pregnancy is mid-late term, 8-BALL will directly assault larger nerve centers of an organization, such as warehouses and laboratories. 8-BALL's strength at this stage is in excess of non-meta human thresholds, capable of significant property damage and neutralizing dozens of combatants in open combat.

Whether or not 8-BALL waits until the onset of labor or triggers it herself (See Supplemental File 1), at the very end of pregnancy she will strike at the main headquarters of her target organization. Survivors report that 8-BALL exhibited enough strength to smash through brick walls, leap long distances, overturn or destroy vehicles. A few

reported witnessing a building collapse on top of 8-BALL, which she survived.

If 8-BALL [REDACTED] during combat, reports claim that she will employ unorthodox abilities like [REDACTED] or [REDACTED]. She was even reported to use her [REDACTED]

She will then usually, but not always, leave a new large baby at the scene for pickup by Department agents. They are then transferred to a facility for care and testing (for more information, see Metahuman Files 4011 through 4016).

Update 07-31-2025

Medical tests of 8-BALL infants have been discontinued pending review due to ethics concerns, as well as an incident where 8-BALL [REDACTED]

## Supplemental File 1: speculations on further abilities

The Department science team has concluded that 8-BALL almost certainly possesses additional unconfirmed abilities that would be necessary for her to function at her level. Everyone on the team agrees that in order for 8-BALL to maintain energy levels while pregnant, she would need to have a highly efficient metabolism. Others, while not unanimously, have put forward the idea of a minor regenerative ability to prevent bone and nutrient loss, either as an inborn ability, or perhaps an enhanced version of ordinary fetus' ability to send stem cells and other aids to the mother.

8-BALL can also give birth repeatedly to nearly record-breaking baby sizes without apparent injury, which implies to the science team that in addition to the outwardly obvious wide pelvis, she must have other anatomical abilities suitable to giving birth. Durable yet flexible tissues, they say, are likely. The super strength available to 8-BALL at the end of pregnancy may also apply to her uterus, making its contractions more powerful.

It's also supposed that end-stage strength may persist for a time after giving birth, since 8-BALL is always able to evade capture afterwards.

It's debated whether the large baby sizes are a side effect of her biology, or she has a degree of control over her pregnancy, and therefore grows a fetus bigger or keeps it longer to increase her powers.

## Supplemental File 2: Names and Symbols

8-BALL has never been known to verbally communicate or announce a name or title. But her exploits did inspire a few names used by various communities. A few include:

La Bombita: Spanish for "The Little Bomb Girl".

Ubumeiko: from the word "Ubume", a wandering pregnant ghost of Japanese folklore.

Lil' Bigmama

Wrecking Ball

Cannonball

Roundie

Expecting Trouble

*Figure 4: Kanji seen spray painted on the abdomen of 8-BALL. From left to right: Small, Large, Giant.*

The Japanese Kanji symbols seen spray-painted on 8-BALL's abdomen have also sparked speculation at the department. Roughly translated, they describe how late in the pregnancy 8-BALL is (see Figure 4). It's been argued that the use of Kanji, the proficient use of Japanese martial arts, and 8-BALL's short stature might indicate Japanese ancestry.

In addition, it would seem that the act of spray painting her own belly would become very difficult by "large" and impossible by "giant", which implies that 8-BALL must have at least one accomplice. None have yet been discovered as of this writing.
