## Foreword

嘿，大家好，我是非人造的衛星

很感謝您再次支持我的本子！

很多朋友反應我順序有問題

所以聲明一下請從左到右閱讀

## Page 2

雖然我很想把自己畫成觸手（像這樣）

不過姑且還是維持個人樣好了，這是我大

學時的髮型

總之那個

因為我的畫功不是頂好，而且又懶...

雖然不是沒在練習...

不過還是趁這個機會

想跟大家自介一下

以及作品的使用指南

Hello everyone, I'm Eze, from the circle Waysin Hijinzou!

Thank you so much for supporting my work once more!

Oh, and please keep in mind that the reading sense of this doujin is from left to right~

## Page 2

You know, I would really like to draw myself as a tentacle (like this).

But for the time being, I'll just keep using my human form; btw this is my hairstyle from my time at university.

Anyway, maybe you already have noticed, but...

I'm a lazy guy with poor drawing skills (not that I haven't practiced though)!

Besides, I'd like to take this opportunity to introduce myself to you and to give you a guide to understand my work as well.

## 触手庭園 – 英語翻訊

我是個偏執狂

啊？為什麼忽然黑掉？

因為我恨啊

這還不都是被逼出來的，性癖稀有

符合口味的東西稀有，喜歡的角色全是冷

門坑

最後只好自己下海誰知道一過十年

如今自己居然成了繪師情況卻依然嚴峻

用得起來得作品太少了，我也不懂為什麼

小雞雞明明很棒啊…可愛的少年雞雞…

好想摸好想幫他剝皮好想用力吸……

好想虐好想榨乾好想瘋狂的欺負他…

尤其…我從短暫的畫齡當中更學到一件事

本子愈畫愈多，就越會發現人類的能力是

有極限的

我想同時享用騷年的全身每個部位

腋下乳頭耳朵脖子肚臍小腹小雞雞

First, I must tell you something...

I'm paranoid.

Hmm? Why did I suddenly say this?

Because I am mad!

It's all because I feel so constrained.

My fetishes are uncommon and so it's hard to find the kind of pics I could enjoy.

Moreover, almost all my favorite characters are unpopular and good artworks of them are scarce...

Thus the only thing I could do is to paint those characters myself.

But I didn't imagine that even 10 years after starting to draw, the situation would still remain the same... T.T

I don't understand why the works that I enjoy are so rare...

I really have no idea... little penises are great though... cute little penises... yeah...

I want to touch one, I want to skin it, I want to suck it hard...

I want to abuse it, I want to squeeze it dry, I want to bully it like crazy...

In particular... there is one thing I have learned since I have started painting, not so long ago:

The more I paint, the more I am aware that there are limits to what I can represent. Why is that restriction so annoying you say?

Because I want to enjoy every part of

## 觸手庭園 – 英語翻訊

蛋蛋屁屁手心腳趾縫全部同時吸個爽

但是你想想，人再多，有可能同時擠在一起吸嗎？

我再問你，桐人和U G O誰是受？你懂我的意思吧？

要怎樣才能同時享受兩個受的小G G呢？

就算不論物理方面的困難，你知道漫畫表現會變怎樣嗎？

像這樣你只看得到一堆頭啦，根本看不到人啊

除非超越人類

是的，只有觸手...（機械也很棒啦）

我不當人類啦！JO—啊！...抱歉...

Page 3

唉，抱歉失態了

my model's body at the same time:  
Armpits, nipples, ears, neck, navel,  
belly, penis,...

I want to suck all of them at the same time.

But think about it: even if there are many people to take care of each part of the sub's body, is it possible to suck them all at the same time?

Let me reformulate: between Kirito and Eugeo, who is the sub? And who is the dom? Do you see what I mean? How can you properly play with the little toys of two subs at the same time all by yourself? Impossible. It's just physically impossible.

Even drawing several doms enjoying the same sub is no good either: you would only see a bunch of heads, and the sub would be completely hidden! Plus, I don't want to share my toys with anyone!!

Unless... unless the dom transcends human limitations...

Yes, tentacles are the only way... (machines are great too)

So there is but one thing to do...

I WILL REJECT MY HUMANITY JO...!!

Page 3

## 触手庭園 – 英語翻訊

但是市面上的作品多數打死不肯碰下面的  
更甚者一直說什麼讓他們只能享受女性的  
快感……

不開玩笑了，尊重理解友善與包容

我並沒有隨意評斷他人喜好的意思

尤其我們自身性癖很容易受歧視與打壓

那麼基本上自己人就不該再為難自己人

既然是自己喜歡的東西，那就自己動手做

主題是「殘酷的榨精」，這類作品屈指可數

因此有關於我的作品

有三點要強調一下

### Page 4

無論是單圖或者漫畫

因為畫面表現我畫不出來或省略的地方

手腳一定是被綁住的

因為畫面表現我畫不出來或省略的地方

...hrmm sorry...

I'm very sorry for this terrible joke...

But anyway, most of the marketed works won't show this kind of fetish.

Even worse, they usually won't focus at all on the sub's penis.....

That's bullshit!! What's the point if you don't torture the penis too!?

Well, more seriously, I didn't mean to mock this kind of fetish.

Respect, understanding, kindness and tolerance are essential to me.

Thus I don't want to judge other people's fetishes arbitrarily

Especially since shotacon is often very badly perceived...

So basically, if you share this fetish too, you shouldn't make things worse for yourself by laughing at the others.

### Page 4

My own fetish is all about shota being ruthlessly milked dry.

Since it's quite rare, I was not satisfied at all by what I could find in standard doujin.

Fine. I will do it myself.

So, as far as my work is concerned, there are three points to emphasize:

## 触手庭園 – 英語翻訊

尿道一定是被塞滿的

然後最重要的

是關於每個本子的「世界線」

想必大家對平行世界的概念不陌生

這些是我特別精選出來的

並非僅是普通的戰敗死亡的結局

### Page 5

「無法迎來死亡的世界線」

魔法也好，科幻也好，沒有自由，無法動

彈，無法老去

在無人所知的某個角落，被強制永遠地生

存下去

就這樣孤身一人，沒有任何救贖的希望，

獨自在黑暗中

體會著永無止盡的...快感與痛苦的折磨...

一般情況當然是不可能的

Whatever the picture or comics, and even though I can't draw everything because of the angle of the scene, three things will always appear:

- 1) Both hands and foot are bounded
- 2) The urethra will systematically be filled with something.

### Page 5

3) Finally, and most importantly: the worldlines of each of my works.

I guess you're familiar with the concept of parallel worlds, right?

The ones I've selected for my stories are a bit special.

Here the hero's defeat doesn't imply his death. Quite the contrary actually: in those worldlines, the hero's death will never occur.

Whatever the cause is, be it powerful magic or advanced technology, at some point the hero's freedom and ability to grow old or die will be taken away, once and for all.

Yes...

Forced to live for eternity in a lost place, unknown to the rest of the world...

Left alone in the dark, without any hope of salvation, he will endure day after day something beyond the

imagination of any sentient being...

Normally, this would impossible. Nothing is eternal and the hero always wins, as everybody knows.

But since it's "my world", I guess it's okay for me, its God, to be a bit of a jerk once in a while (ΦωΦ).

### Page 6

So, concerning the world that you will soon enter:

You will meet a red-haired boy with crimson eyes and a knack for rune magic, as well as a powerful biological weapon called Alterasia, able to infect even the otherworldly mechanical life form known as the Nasods. Together, they form the "Contamination".

What will now unfold is the story of how this Contamination has brought eternity to our brave Rune Slayer, as well as both excruciating pain and exhilarating pleasure...

On one side the most sophisticated technology ever created.

On the other a biological form designed to parasitize even machines. The Nasods are mechanical beings which have been parasitized by the biological weapon known as Alterasia. This phenomenon is called the "Contamination".

Either side was powerful enough to conquer the world in the blink of an eye.

As a result of the fusion of such terrible entities, the Contamination was nigh invincible.

Now, somewhere in deep underground tunnels forgotten by the rest of the world, advanced contamination is thriving at an insane pace, unbeknownst to everybody.

Indeed, as the Alterasia seeks to evolve even more, it covets the magic of other living beings to do so.

In an undetectable manner, it leads its preys step by step to the heart of the Contamination.

At the bottom of it all...

Soon enough, Els would learn the hard way that trying to escape or resist only makes the tentacles strengthened drastically their grip on his body.

As if punishing a disobedient boy, the tentacles milked him even harder, and so increased drastically the amount of squeezed semen.

Poor Els, unable to bear such amounts of pleasure and pain at the same time, could only clench his teeth and hope it would end soon.

Once the boy's ability to resonate with the Power of El was confirmed, the Contamination began its project to transform him into a perpetual seedbed, one exclusively dedicated to accelerating its own evolution.

The tentacles began to explore the boy in various ways, searching for the sensitive areas of his body

Occasionally, the boy was hung up high and manipulated in every possible way.

Whatever the considered method, only the unceasing abuse of his penis would never stop.

While being battered by an endless series of tentacles of various shapes, Els had no chance of getting up: permanently confused and dazed, his body was at the mercy of the constant pressure of the tentacles

Even so, the tentacles would not let him go, not even for a second.

Instead, they continued to force him to cum over and over again.

Exhausted, the boy's eyes were glassy and empty. Occasionally, he would sob and moan.

The only thing which never stopped was the forced erection of his penis, as it was constantly being squeezed by tireless tentacles.

At this point, there was only one proof the pitiful boy was still alive: his body kept reacting to each climax by jerking violently.

At this point, making the boy reach orgasm by simply pumping him became increasingly difficult.

The quality of the extracted magic had also sharply decreased.

So it was now time for the tentacles to begin the second stage of the transformation program.

They poured directly into the boy's body a special kind of secretion which acts like a very potent healing potion.

Not only does this strange substance restore strength, but it also removes and expels the body's wastes.

It hurts... I feel weird... my body...

The young man's battered penis was now fixed in a permanent state of erection thanks to the tentacles' mysterious fluids.

The tip of his penis, which was the last line of defense of the most sensitive part of his body, had been completely stripped of its skin.

And so poor Els was left totally helpless against the merciless assaults of the tentacles, which could polish his shiny glans in every possible way at will!

### Page 23

Little did Els know that he was being nursed by the most advanced biomedicine in this era.

In order to preserve the exceptional specimen Els was, the Contamination altered his body in the most flexible and safe way.

Various data, like his number of ejaculations, orgasms, his vital signals, etc. were recorded minutely. His body was progressively remodeled from the inside by the use of various secretions and synthetic fluids.

### Page 26

The result was a drastic improvement of Els' 'performances': increased semen output, prolonged ejaculation, better ability to maintain a fixed position for a long time, etc.

### Page 24

The glans beneath the boy's foreskin had never been stimulated, not even once, so it remained in its pristine state: pink and smooth.

As if discovering an extraordinary secret, Els's now swollen glans was the center of the attention of the Contamination.

Modifications were continuously made to maintain its natural high sensitivity in spite of the massive dose of stimuli it was fated to receive.

### Page 26

Training the glans did not just enhance the production of semen; it also makes it susceptible to absorb more of the tentacles' nutritive fluids, or so the Contamination had discovered.

Each time the boy finished cumming, several tentacles gripped the tip of his penis firmly while others rubbed and twirled around the glans.

艾索德被駕馭在高潮的空中始終無法獲得  
解脫，觸手不時變換頻率甚至內側紋路

Repeating this process over and over they could torture the thin, young skin of the boy's penis to their heart's content.

Already at his limits and unable to cum, Els could all but scream helplessly at the constant and renewed torture the tentacles inflicted him.

The boy, left mindless by countless abuses, was now drowning in the pleasure of receiving electroshocks each time he climaxed.

### Page 32

Although Els had been squeezed dry countless times, he was never released nonetheless.

Actually, the tentacles changed their speed, sense of rotation, intensity, and even the inner texture on a regular basis. But not even once did they loosen their grips on the poor boy.

All these variations served two purposes: finding the optimal settings which would make Els ejaculate instantly, and carefully controlling the sensitivity levels of Els' penis to make sure he wasn't overstimulated to the point it would lose in sensitivity.

汙染發現，對長期苗床化的目標而言最大的困難就是艾索德的共鳴（習慣）能力  
因此最後一步改造預定將其記憶進行定期化重整  
在一株觸手熟成後，將記憶及肉體恢復到第一天的狀態  
並置換到另一株觸手的環境下重新開始作業流程  
到汙染遍布全島、甚至全世界為止

### Page 42

In the end, the Contamination realized that the most serious obstacle to its goal of making a tentacle nursery out of Els was his memory. Although in a vegetative state, Els' body would still remember all the stimuli he underwent, making additional ones much less effective. Therefore, Els' memories were to be erased on a regular basis in order to make the transformation process truly complete. And so, each time a tentacle matured, both Els' memory and body would be restored to their original state, when he was first captured by the Contamination. This process would repeat again and again, forever and ever. Yes, even after the Contamination reached its goal and spread all over the world, Els, the most productive tentacle progenitor who ever existed, would still continue to satisfy the eternal hunger for breeding and evolution of the tentacles. Even so, don't worry: there is still room for those interested...

## Bonus: Tentacle taxonomy

### 章魚型

觸角同時具有吸盤及肉墊般的特殊構造

內部具有螫針，可以進行侵入及吸引

### 海葵型 I

數量多，較細小、前端如同水母螫刺般

能透過接觸注入魅毒、麻藥、興奮劑等特殊

分泌物

### 流體型

構造特別的品種

末端有著類似史萊姆般的流體構造

能夠消化蚊子等小蟲，但無法傷害到人體

### 海葵型 II

表面及內布滿大量細長的觸手

這一品種的觸手並不會急於攝食

### Octopus type

A special genus of tentacle which possesses both suction cups and flesh pads. This species also uses its internal needle for penetration and suction purposes. It's quite rare, and thus hard to find in the wild.

### Sea anemone type I

Its numerous appendices are slender and their tips are slick, just like the tentacles of a jellyfish.

And exactly like a jellyfish, they are venomous:

they can inject special secretions to their preys through contact, such as aphrodisiacs, anesthetics, or stimulants.

They all possess an anti-magic effect which prevents him to use his powers to break free.

Their purpose is simple: restricting the prey and sealing his magic away, then pouring his body with aphrodisiac substances which will make the magic extraction process easier for the other tentacles.

### 吞食型

觸手中構造及生態最為複雜的一種

### Viscous type

Another special kind of tentacle.

Slime-like fluid keeps pouring from its end.

It usually feeds on mosquitoes and other small insects, but it cannot harm humans.

Actually, this sub-species is a by-product of the never-ending evolution of the Contamination: its purpose is to stimulate the prey by sucking and rotating quickly around his nipples. They may also latch onto his penis and spin at an insane pace to further squeeze its prey.

This extraction method was not available to the Contamination at the beginning, and is a result of its prolonged contact with men.

### Sea anemone type II

The inside of its “mouth” is covered with a large number of long and thin tentacles.

The tentacles of this species are in no hurry to feed.

Instead, they patiently use their tendrils to invade their prey’s body and stimulate him during a long time. By doing so, they increase his

內部不但具備了能夠強制維持獵物生存機能的环境

還有著許多共生關係的他種類觸手

甚至還能分泌出停止獵物成長，以避免撐破自身體形的毒液

### 舌型

表面上具有無數如貓舌般的微小倒鉤

“quality”, that is, they enhance his semen output, as well as the magic/semen ratio. This benefits to all other tentacles, and so this species is quite appreciated by the other varieties.

### Sea anemone type III

A hybrid which possesses attributes from both the sea anemone type II and the grappling type.

It's uses its dexterous little tentacles to toy with the nerves of its victim, and at the same time pumps relentlessly to drain him of all his semen.

But this is not only the thing it is capable of: just like the second type of sea anemone, this breed also helps the other tentacles by modifying its prey. To do that, it inserts a special appendice inside his urethra, which will proceed to reach the prostate and the seminal vesicle. Then it will secrete potent toxins to stimulate these two glands. As a result, the semen production will increase drastically, and the prey's magic will be more efficiently drained by the ejaculation process, resulting in greater quantities of high-quality semen.

## 触手庭園 – 英語翻訳

通常數量極多，會在獵物身上不斷游移，  
舔食有機物維生  
尤其喜歡爭食腋下、掌心、腳底等容易出汗的部位

### Grappling type

This variety does not possess external appendices unlike most of the other subspecies.

Instead its front end is surrounded by a circle of strong suction cups which can firmly hold some part of the prey's body, usually his penis or nipples.

Once caught, they move powerfully back and forth while contracting to squeeze semen and feed, or to stimulate the prey to help other tentacles.

### Swallowing type

The most complex type of tentacles in terms of anatomy and ecology.

Their sizes vary widely: some individuals can barely engulf a man's fingers while others can swallow all four limbs, and even the entire human body with ease.

In order to secure a long-term source of nourishment, they evolved and can now extract nutrients from their preys without killing them.

To do so, they developed a complete ecosystem inside their bodies.

Here numerous other types of

## 触手庭園 – 英語翻訳

tentacles live and work together to keep the prey alive, in a large-scale and intricate symbiotic relationship.

But the most mysterious tool this creature can use is a special toxin which causes its prey to stop growing, and preserves both its appearance and physical characteristics.

Alone, this drug is not powerful enough to avert death.

But mixed with the fluids of the other kinds of tentacles, it can halt completely the aging process, thus preventing the prey from dying altogether.

### **Tongue type**

Its body is covered with numerous tiny barbs similar to a cat's tongue.

This subspecies is both very long and strong, capable of restraining easily a grown-up man.

The fluid secreted at its surface serves to catch and digest small bugs. But it's far too weak to cause any damage to the human body. Instead it only causes a long-lasting prickling sensation, akin to a dim electrical shock.

They live in large packs, and so

## 触手庭園 – 英語翻訳

always appear in large numbers as well. They move around human preys while licking organic matter, like dead skins, sweat, etc.

They often compete with each other to latch on the areas of the body that sweat easily, such as the armpits, palms, and soles of the feet.

By continuously licking their prey, they keep him clean and alleviate the tension accumulated in his muscles due to excessive stimulation of his body by the other types of tentacles. Their saliva also has a refreshing effect which protects its prey from heat strokes.
